

Flange Bolt Isolation Accessories 4 pipes

High-quality isolation materials for an electrical isolation point

Product information

Special isolation materials for flange bolts and nuts fulfil the requirement for an electrical separation point and prevent contact corruptions of the flange joint. The bolt isolation set contains the required quantities of isolating washers, isolating sleeves and steel washers for the particular flange joint size / standard. One bolt requires: two isolating washers, two steel washers and one sleeve. The bolt isolation set protects both sides of the flange joint from possible electrical short circuits through the nut and bolt. The bolt isolation set can be delivered for all common flange standards, sizes and pressure rates.

Usage

- New installation areas
- In connection with flange isolation gaskets
- Also suitable for replacement of existing flange joints during maintenance activities at the connection point

Isolation bolt

Bolts are pre-coated with isolating epoxy resin / glass fibre material. One isolating bolt set contains two isolating washers, two steel washers and one nut. The Isolation bolts steel quality and grade are made according to customer specification. (Standard bolt grade is 8.8 galvanized)

Isolating washer

- G10 (standard)
- G11 (special)

Isolating sleeve

- Mylar (standard)
- Nomex (special)

Steel washer

- Steel ST37, galvanized DIN 126 (standard)
- Stainless steel V4A (special)

Standard Isolating Kit =

Isolating Washer: G10
Isolating Sleeve: Mylar
Steel Washer: steel galvanized

Special (selection of combination) Isolating Kit =

Isolating Washer: G10 or G11
Isolating Sleeve: Mylar or Nomex
Steel Washer: steel galvanized or stainless steel

Technical data

Please find the dimension and pressure rates in our price list or ask us.

Characteristics:	G10	G11	Mylar	Nomex	Isolating Bolt
Material	Epoxy resin glass fibre	Epoxy resin glass fibre	Spiral wound polyester	Armid spiral wound paper	Epoxy resin glass fibre
Operating temperature	-60°C bis +130°C	-60°C bis +180°C	-60°C bis +150°C	-196 °C bis +200 °C	200°C
Water absorbtion	<0.1 %	<0.1 %	<0.8 %	< 0.1%	<20 mg
Dielectrical strength	20.000 V/mm	60.000 V/mm	270.000 V/mm	22.500 V/mm	min. 5 KV/mm

Flange Bolt Isolation Accessories 4 pipes

Installation guide

Follow the installation instructions carefully to ensure correct functioning of the flange isolation.

1. The sealing surface of the flange has to be clean, free of grooves and edges (Flange surface according to DIN/ASME standard)
2. Insert the gasket carefully between the flange sealing surfaces
3. Lubricate bolts
4. Insert bolts incl. isolation washers and sleeve through the bolt hole and hand tighten them:
The steel washer will be placed on the bolt head and nut; the isolation washer will be placed directly on the flange. The bore holes of the flanges and isolation gasket have to be aligned with each other.

Calculation of isolation sleeve length:

$2 \times \text{flange thickness incl. raised face} + \text{thickness of flange isolation gasket} + 2 \times \text{thickness of isolation washer} = \text{sleeve length}$

5. Tighten bolts evenly (in three steps 30% + 40% + 30%) with a torque wrench acc. to the tightening torque table spec.

Tightening torque for flange bolt

M60	5,130	12,000	16,800	20,200		7,680		

Note:

- The flange bolts generally have to be greased/lubricated for the installation
- For gas systems, it is advisable to use a PTFE based grease (common greases contain hydrocarbons which could cause incorrect gas measurement readings with a gasometer)

Warning: For DIN flanges with bolt grades ≥ 8.8 , we advise to use 80% of the tightening torque. 100% tightening torque could deform the flange blades.
