

Flange Gaskets - Type RSG-TW-V 4 pipes

Product Information

RSG-TW-V rubber steel flange gasket is a two-piece construction, made from elastomeric material vulcanized over steel rings.

With its twist and plug mechanism, the RSG-TW-V can be adjusted to the angle of the sealing surface.

Elastomeric elements provide secure sealing against fluids on flange connections with **non-parallel flange surfaces**. The two-piece construction of conical elements not only forms the seal, but also compensates for angular misalignment by allowing **adjustment up to 8°**.

Steel rings, vulcanized into the elastomeric elements, ensure mechanical stability and long term functionality.

Material qualities and technical data

RSG-TW-V for water, various other fluids, industrial applications and waste water:

EPDM

Operating temperature: -25° C up to +120° C

Hardness: 70 ±5 Shore A

Approvals: DVGW W270, Elastomer guideline of UBA/KTW, WRAS and ACS

Specifications: DIN-EN 681-1, Type WA/WC/70

Other material qualities and certificates are available on request.

Application

RSG-TW-V flange gaskets are intended for:

- flange connections with sealing surfaces not parallel to each other
- hydrants with misaligned connection tee / duckfoot bend
- pipes for firefighting
- buried pipeline systems

Elastomer EPDM provides excellent resistance to several substances, including different chemicals, industrial water, aqueous salt solutions and is **DVGW approved for drinking water application**. Very good ozone and UV resistance!

Chemical resistance table available: www.4pipes.de

Unique advantages

- Easy and cost effective installation due to adjustment of sealing surfaces
- excellent resistance to substances in pipes
- vulcanized steel rings provide long term stability
- high tightening value at low bolt forces
- no retightening of bolts
- excellent operational reliability
- no leakage
- cost effective because follow-up costs are avoided

Dimensions and pressure rates

RSG-TW-V flange gaskets are manufactured according to DIN-EN 1514-1 (comparable to old DIN 2690), form IBC, self-centering in flanges according to DIN-EN 1092-1, DIN-EN 1092-2.

Please find available dimensions and pressure rates in our price list or contact us.

Gasket dimensions suitable for plastic and ANSI flanges are available on request.

The 4 pipes warranty is limited to the replacement of faulty material. The usability of the product for the individual application is fully under the user's responsibility. 4 pipes GmbH does not assume any warranty for already installed and reused flange gaskets.

Flange Gasket - Type RSG and RSG-TW-V 4 pipes

Installation RSG

- the sealing line of flange surfaces needs to be clean, free of grooves and edges
 - insert the gasket carefully between the flanges
 - lubricate bolts
 - insert bolts into bolt holes
 - tighten bolts evenly (in three steps 30% + 40% + 30%) with a torque wrench according to the tightening torque table specification below
 - tighten bolts in a diagonally opposite sequence as shown in the picture on the right
- For any other installation or operation situation please contact our customer service.

RSG

Installation RSG-TW-V

- sealing lines of flanges must be **clean and free of grooves and edges**
 - extra long bolts with smaller diameter might be necessary
 - adjust angle of RSG-V according to misalignment of flanges by plugging and twisting sealing elements into each other
 - IBC form ensures self-centering of gasket
 - insert the gasket carefully between the flanges
 - lubricate bolts
 - insert bolts into bolt holes
 - tighten bolts evenly (in three steps 30% / 40% / 30%) **in a clockwise direction (see picture to the right)** with a **torque wrench** according to table below
- For any other installation or operation situation please contact our customer service.

RSG-TW-V

Important advice

Gaskets should only be installed once. Don't apply any additional sealant, lubricant or glue on the installed gasket. Never install more gaskets on top of the first one. Please adhere to the installation instructions/regulations and requirements for qualified fitters, in accordance with DIN-EN 1591.

Torques values for flange gaskets type RSG and RSG-TW-V					
Values in Newtonmeter (Nm)					
DN	PN 6	PN 10	PN 16	PN 25	PN 40

RSG-TW-V (twist and plug mechanism)

Calculated for flanges on the basis of EN 1591-1, considering the specific gasket values acc. to DIN EN 13555.

Values based on friction $\mu = 0.14$ (bolts lubricated). Bolts quality 5.6 or higher. Surface stress level 15 N/mm².

For PE flanges please note:

The torque value must be adjusted to the grade of the PE flange. The torque values are approximate values, they can change under influence of various parameters such as temperature and lubrication.

For each deployment of this flange, it is the responsibility of the user to ensure the suitability of the material in use.
